

VOCAL EFFECTS

MVP1 AUTUNER

AUTUNER

MVP1 AUTUNER Vocal Processor

This powerful vocal effects pedal offers precise pitch correction and exceptional vocal enhancement features for vocalists, band members, and singer-songwriters alike.

The pitch correction features in the AUTUNER are incredibly versatile. With an LED button, users can choose between flat, warm, and bright vocal tones. Then the 'correction' dial can be used to define the sensitivity of the pitch correction. Users can press and hold the left foot-switch to trigger the pitch correction's vocal synthesizer. AUTUNER even has 2 stunning built-in effects modules offering both delay (including tap-tempo) and reverb. The effects modules offer 3 different types of each effect, making the pedal an amazing creative tool for both vocalists and guitarists.

Overall, the AUTUNER ensures that vocalists and guitarists alike have everything they need for impressive pitch correction, vocal synthesis, and spacial processing in a single, versatile, compact unit.

All three pedals in Moorer's new vocal pedal range feature XLR in/out and even 48V phantom power, as well as the standard 1/4" sockets for guitar. These can be used in 'mixed mode' or as discrete individual outputs.

FEATURES

- Pitch correction feature with a controllable sensitivity dial
- Foot-switch controllable vocal synthesizer mode
- Three vocal tone modes: flat, warm, and bright
- Four delay modes: tape, digital, slap-back, and OFF
