MVP2 HARMONIER

HARMONIER

**MVP2 HARMONIER Vocal Processor**

The MVP2 HARMONIER is an innovative vocal processor pedal designed to elevate both vocal and guitar performance, offering tonal precision, creativity, and convenience in one compact pedal.

At its core, the HARMONIER offers a versatile pitch harmonizer effect, allowing users to harmonize with any key in the chromatic scale, with the 'sharp' button being used to select sharp keys. The 'Mode' dial facilitates further customization, offering 11 different harmony modes that control the harmony's interval, including classic intervals such as octaves, fifths, and thirds.

The HARMONIER offers further tonal flexibility thanks to its reverb function. The pedal also offers 3 distinct tone modes: flat, warm, and bright. These can be controlled by activating the pedal's unique 'hidden mode' and using the 'sharp' button to select each mode.

All three pedals in Mooser's new vocal pedal range feature XLR in/out and even 48V phantom power, as well as the standard 1/4" sockets for guitar. These can be used in 'mixed mode' or as discrete individual outputs.

FEATURES

- 12 pitches with 11 different harmony mode
- 11 harmony modes that provide different harmonic intervals
- High-quality internal reverb module with adjustable volume
- 3 tone modes: flat, warm, and bright
- 7 preset slots
