MVP3 LOOPATION

MVP3 LOOPATION Vocal Processor

The MVP3 LOOPATION is a versatile and feature-packed pedal designed to enable musicians to create seamless loops with their voice and instruments.

LOOPATION provides 11 save slots for recorded audio loops, with 8 of these slots featuring 5 minutes of recording time, and the other three having 10 minutes. Slots can be selected with the simple 'song' dial, and once audio has been recorded, the files will automatically save onto the device. The pedal offers two recording modes: real-time, and auto.

Pressing the right foot-switch commences file playback, and during playback, another right press will enable dub mode, which will continue until the foot-switch is pressed once again. Playback can be halted with two quick presses of the right foot-switch, or alternatively by switching to a different save slot.

All three pedals in Mooer's new vocal pedal range feature XLR in/out and even 48V phantom power, as well as the standard 1/4" sockets for guitar. These can be used in 'mixed mode' or as discrete individual outputs.

FEATURES

- 11 loop memory slots with up to 70 minutes of recording time
- Unlimited overdubs within each memory slot
- Features for overdubbing, deleting, undoing, redoing, and reversing recordings
