

X2 SERIES PEDAL

TENDER OCTAVER X2

MX2OCTAVE

Trade Price: £93.88 EX VAT RRP: £169.99 inc. VAT

TENDER OCTAVER X2 Octave Effect

The Tender Octaver X2 aims to take guitar octave capabilities to the next level.

Unlike the Pure and Purer Octave pedals which focus on pitch-shifting by the semitone, the Tender Octaver X2 is designed with a more specialized intention, focussing solely on octave shifts. When using the pedal, users can choose between two different octave shift modes, facilitating the addition of both subadjacent and upper frequencies to a guitar signal. Both options have two dedicated rotatable dials, one for determining the volume of the added octave, and one for fine-tuning its tonal colour.

Both of these octave effects can be used independently and can be toggled on or off with their own easy-access foot-switches, each paired with its own LED light to indicate its current activation status. Furthermore, both effects can also be used simultaneously, empowering guitarists to experiment with unique tri-octave guitar presets.

FEATURES

- Precise octave-shifting DSP algorithm
- Two octave effect options - subadjacent and upper
- Two effect volume dials, one for each octave
- A 'Direct' dial for adjusting the dry signal volume
- 14 unique user preset slots
- A dual-function 'Save' button for presets
- 7 dual-color preset LEDs, with red representing one half of presets, and blue representing the other half
- Two additional LEDs, indicating the activation status of both octave effects
- Two foot-switches that function both independently and simultaneously for effect toggling and preset browsing
- 1/4" mono input and output
- DC 9V power supply
- Minimalistic and compact casing design
